Standing by for your request for assistance. I do BS work as well as the rest of EPA's best experts!

Oh I can tell you some stories. Trying to explain to one of the RA's that the results of 3 water samples from 100 miles away probably before the slug gets there means nothing. Just one example.

Stopping mine investigations probably will insure another release. Don't let the facts cloud your decision making process.

Just let me know if you want me to go into DC and get CMAD involved....

Sounds like a fool's errand. The waste water is already in the river and they want to wait to verify data?

I heard that Gina has shut down all investigatory work at mine sites. So instead of taking advantage of the present situation and pushing for more funding to characterize the hundreds of abandoned mines, EPA management is waffling and burying their heads in the sand.

Okay. The usual HQ BS of vetting data before release. No actions on preliminary data. It is pathetic how out of touch they are.

Learn the latest on characterizing and remediating groundwater in fractured rock!

Hear from experts such as keynote address speaker

Dr. Paul Hsieh of the USGS, who will present “Flow and Transport in Fractured Rocks — Retrospective and Look Ahead.”

Other presentations include:

- Techniques for Source Zone and Plume Characterization of Tetrachloroethene in Fractured Limestone Aquifers
- Advances in Thermal Techniques for Improved Hydrophysical Characterization of Flow Through Fractured Rock
- Use of Tracer Dyes to Understand Fractured Bedrock Flow During a

Pumping Test

- Groundwater Extraction and Treatment of Fractured Bedrock: An Optimized Success!
- Case Studies: Groundwater Modeling of Fractured Bedrock for Effective Decision Making
- Mass Discharge vs. Aquifer Assimilation Capacity, A Complex Site Case Study
- Air Sparging in Highly Fractured Rock
- Shifting Between Site Specific and Regional Perspectives to Understand How Bedrock Data Fits
- [View the complete lineup here!](#)

Plus don't miss out on these other optional opportunities —

- Sign up for a [field trip](#) taking place Wednesday, September 30 that will focus on "Integrating Ductile and Brittle Surface Structures and Borehole Geophysics to Understand the Hydrogeology of Bedrock Wells in Hinesburg, West-Central Vermont."
- Take the two-day short course, [Monitored Natural Attenuation: Mechanisms, Site Characterization, Evaluation, and Monitoring](#), September 30-October 1, also taking place in Burlington, Vermont.

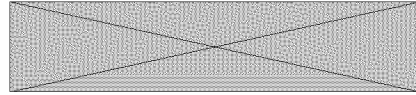

[Learn more about the conference and register today!](#)

Don't delay — early rates end August 28.

Hotel Info

NGWA has secured a limited block of rooms for a discounted group rate at the Hilton Burlington. Rooms are available on a first come, first served basis — but don't miss out. **This special room rate is only available until August 28.** [Click here for more information.](#)
